VITyarthi — Digital Literacy

Project Report

Name	Udit Ravikant Chaubey
Registration No.	25BCE11330
Year	First Year
Course	Digital Literacy
Type	Project Report
Submission Deadline	31st March, 2026

Introduction

In today's digital age, having strong digital literacy skills is essential for students to succeed academically and professionally. As a Student Digital Ambassador, this project focuses on building awareness and practical understanding of digital tools, online communication, and cyber safety. The project consists of five tasks that cover key areas such as digital awareness, professional online presence, coding platforms, email etiquette, and cybercrime prevention. Through these activities, I explored various platforms like GitHub, LinkedIn, and Google Forms, and created useful resources such as an infographic, digital portfolio, and awareness checklist. This project helped me understand how to use digital tools responsibly and effectively while preparing me for future academic and career opportunities.

Task 1: Digital Literacy Infographic

For this task, I used Canva to create a one-page infographic on Digital Literacy Awareness. The design includes key topics such as the definition of digital literacy, safe internet practices, and useful digital tools for students. I used icons, short text, and a clean layout to make the information easy to understand and visually appealing.

The infographic explains how digital literacy helps students use technology efficiently, stay safe online, and maintain a professional online presence. It also highlights tools like Google Workspace, GitHub, and LinkedIn, which are useful for students in academics and career development.

One challenge I faced while creating the infographic was selecting the most important information and presenting it in a limited space without overcrowding the design. However, this task was interesting because it improved my creativity and helped me understand how to communicate information visually in a simple and effective way.

Task 2: Student Digital Portfolio (150–200 words)

In this task, I created and updated my profiles on GitHub, LinkedIn, and HackerRank. These platforms are important for building a professional digital presence. GitHub is used to store and showcase projects, LinkedIn is used for networking and professional identity, and HackerRank is used to practice coding skills.

On GitHub, I created a profile README that includes my name, branch, and learning goals. On LinkedIn, I added my education details, including my degree and institution. These steps helped me establish a basic but professional online identity.

In the next four years, I plan to use GitHub to upload projects and track my progress, LinkedIn to connect with professionals and explore opportunities, and HackerRank to improve my coding skills. This task helped me understand the importance of maintaining a digital portfolio and how it can support career growth and internship opportunities.

Task 3: Coding & Collaboration Platforms

For this task, I used HackerRank as my coding platform and completed a beginner-level problem. This helped me understand basic programming concepts and improved my logical thinking skills.

In the second part, I created a Google Form titled “Digital Literacy Awareness Quiz” with five questions, including multiple-choice and short-answer questions. I also viewed responses in Google Sheets, which helped me understand data collection and analysis.

These tools are very useful academically. HackerRank helps in improving coding skills and preparing for technical interviews, while Google Forms can be used for surveys, quizzes, and feedback collection in academic projects.

This task was valuable because it introduced me to platforms that support both learning and collaboration. It also showed how digital tools can make studying more interactive and efficient.

Task 4: Email Etiquette & Communication

Poor digital communication can lead to misunderstandings and missed opportunities. For example, if a student sends an email to a professor without a proper subject line or polite tone, it may be ignored or misunderstood. This can result in delays or negative impressions.

To avoid such situations, it is important to follow email etiquette, such as using a clear subject line, proper greeting, structured content, and a respectful tone. In this task, I learned how to write professional emails and the importance of communicating clearly and politely.

Good communication skills are essential in both academic and professional environments, and this task helped me improve my ability to interact responsibly online.

Task 5: Cybercrime Awareness

While researching cybercrime, I was surprised by how common online frauds like phishing and UPI scams have become, especially among students and young users. Many people fall victim due to lack of awareness and carelessness while sharing personal or financial information.

One important habit I will change is being more cautious while clicking on unknown links or messages. I will always verify sources before entering any sensitive information online.

This task helped me understand the importance of cyber safety and how simple precautions can prevent serious problems. It also encouraged me to spread awareness among others about safe online practices.

Conclusion

This project provided a comprehensive understanding of digital literacy and its importance in modern education and professional life. Through various tasks, I learned how to create digital content, build a professional online presence, use collaborative tools, communicate effectively, and stay safe online. Each activity contributed to improving my technical and communication skills. Overall, this project has prepared me to use digital tools responsibly and confidently, and it will be helpful in my academic journey as well as future career opportunities.
